

Intelligent eXchange

intelligent eXchange (iX) provides the ability to deploy IP based telephone extensions as a hosted service to businesses.

Intelligent eXchange (iX) provides the ability to deploy IP based telephone extensions as a hosted service to businesses.

The iX Service provides fully functional IP extensions on demand and is delivered from a robust hosted platform. In addition to the basic connectivity, iX is also able to enhance the existing telephony service by delivering functionality from the extensive suite of hosted business applications.

The Hosted Service is designed to allow the customer to focus on their business goals rather than worrying about the ownership and support of its telephone network. The service is delivered from a high availability and fault tolerant multi-tenancy platform over a suitable IP network

iX-Fone & iX-Fone CE

iX-Fone, a feature rich softphone application, is provided as a natural companion to the iX Service. This enables the customer to deploy a very cost effective, feature rich, telephone extension on every PC or laptop, avoiding the relatively high costs of IP Handsets. The iX-Fone CE is used for PDAs.

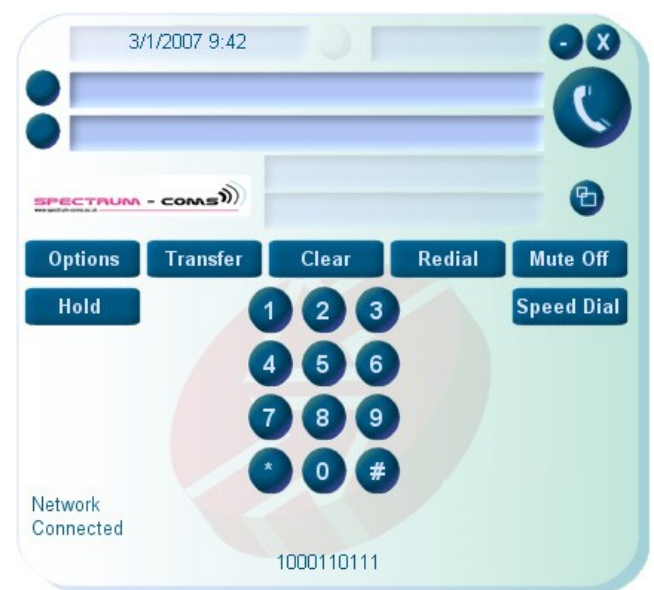

iX-Console

Operator control of the customer's extensions can be achieved via the iX-Console, an optional fully featured, PC based operator console. The iX-Console offers full interoperability with third party open standard SIP products

Desktop Handsets

A wide choice of third party SIP phones to suit the customer's needs and budget can also be supplied. iX supports traditional PBX features often not found in competitive IP Telephony products, including: message waiting, caller ID, call transfer, call waiting, call divert and call hold.

Deploying a Hosted/IP Centrex 'virtual' telephony solution rather than purchasing an on-premises PBX solution frees the customer of capital expenditure costs and ongoing charges for administration support and maintenance. The Hosted service provides a known cost of ownership whilst allowing the customer to react rapidly to changing business needs

POLYCOM® SOUNDPOINT® IP 501

Features and Benefits of the intelligent eXchange Service

Feature	Description	Benefit
Existing installed hosted service platform	Enables rapid deployment, instant capacity uplift and emergency/disaster recovery facilities	<ul style="list-style-type: none"> • Rapid response to changing business requirements
